microgreens

Petite but powerful, microgreens are parading into restaurants, farmers markets, kitchens and homes across the country. They bring flavor, aroma, color and texture to all kinds of cuisine, adding a new layer of creative presentation to the plate. Microgreens are the ideal crop for indoor growing - from greenhouses to vertical and container farms to home kitchens. They are a great choice for fast crop turns and for filling the smallest (or largest!) spaces in off-season or alternative growing times.
