

# Sakata Home Grown

NEW  
2022  
VARIETIES

## AZUMA Beet

This smooth beauty is easy to grow, harvest, and clean and is so versatile in the kitchen. Azuma matures early and is quick to round out, making it a great option for baby beets. The roots have deep, saturated color and little to no zoning. The smooth exterior and small root and crown mean Azuma is easy to clean and attractive for slicing. Azuma is early, heat tolerant, and has bright green tops. Days to maturity from direct seed: 80-85.

- Deep purple color with no zoning
- Early maturity
- Smooth roots

## CENTENNIAL Broccoli

An exciting addition to the Sakata broccoli line, Centennial plants are early and medium-sized with large, smooth, small-beaded heads. The stems are long with minimal side shoots. Centennial is widely adapted, performing well in all broccoli growing areas, and can be grown year-round in the cool coastal growing regions. The beautiful heads store well and can be used fresh as whole heads, cut into florets, and frozen. Days to maturity from transplant: 83-86.

- Widely adapted
- A heavy-headed and small-beaded variety
- Can be grown year-round in cool coastal regions

## DYNASTY Broccoli

Dynasty is a mid-season, widely adapted broccoli variety with smaller, lower leaf attachments to aid with ease of harvest. Dynasty has medium-sized plants with smooth, dome-shaped, medium green heads that are anthocyanin free. High yielding plants matured very uniformly in all our trials. Plants work well in the fall or spring and heads can be used whole, in florets, or frozen. Days to maturity from transplant: 86-90.

- Harvest uniformity
- Head quality
- Anthocyanin free

## EMPIRE Broccoli

Empire produces beautiful, high-domed, smooth heads with great weight and deep emerald color. The large, tightly packed heads are best used as whole crowns. The compact plants are sturdy and leafy. Empire shows very strong blind plant tolerance and works best in the spring, fall and mild over-winter seasons. Days to maturity from transplant: 90-95.

- Crown cut/short trim type
- Overwinter and fall harvest slots in Coastal California
- Blind plant tolerant

## KINGDOM Broccoli

Kingdom delivers beautiful broccoli crowns in just 70 days from transplant. The plants are medium-sized with nice, low sitting, dome-shaped heads suitable for whole crown or floret use. Kingdom offers good crown quality for the early-maturity slot and has shown excellent performance in the Northeast summer/fall harvest slots as well as early winter harvesting in the Desert Southwest. Days to maturity from transplant: 70.

- Early maturity
- Nice dome shape
- Well adapted

## PUREZA Cauliflower

Pureza, a Spanish word for "pure," perfectly describes this bright white, smooth, domed-shaped cauliflower with beautifully wrapping leaves. The plants are sturdy and upright, very uniform, mid/late maturing (similar maturity to Incline), and vigorous. Pureza heads are heavy with dense curds. Days to maturity from transplant: 76.

- Bright white with excellent self-blanching habit
- Upright, vigorous plants
- Dome-shaped heads with heavy, smooth curds

## 7436 Lettuce

7436 romaine stood out like an emerald jewel in our trials. The heads are compact and very solid with nice hearts and deep green leaves. 7436 shows good bolt tolerance and works well for fall plantings. For the cutest heads, try closer planting or give the heads room to grow large. Relative maturity from direct seed: Mid-early.

- Compact heads
- Solid hearts
- Deep green color

## REGENCY 2.0 Lettuce

Classy iceberg type, Regency 2.0, stands firm with strong field tolerance to downy mildew, Tipburn, and Corky Root. The solid, dark green heads are uniform and have a low core and good bolting tolerance. Patent# US PVP: 201300146. Relative maturity from direct seed: Mid.

- Uniform
- Stronger field tolerance to Downy Mildew than Regency
- Dark green color

## TETON Lettuce

Teton has the bright green color and crisp texture that you look for in a romaine. The large heads have straight ribs and are formed on compact, upright, plants. Under large outer leaves, Teton has tightly packed hearts with perfectly shaped, straight leaves. Teton has shown strong field tolerance to LNSV. US patent applied for. Relative maturity from direct seed: Mid-Late.

- Large size romaine on compact plant
- Strong field tolerance to LNSV
- Heavy, solid hearts

## YOSEMITE Onion

Yosemite is an intermediate, or mid-day, onion that produces jumbo to colossal-sized bulbs. Globe-shaped, it has several outer layers of vibrant brown skin that provide good protection to the firm, white, single ring centers. Plants are grower friendly and show excellent uniformity and intermediate resistance to Pink Root. Days to maturity from direct seed: 110.

- Large sized bulbs
- Good yielder
- Grower friendly

## CHAAK Pepper

This high yielding, beautifully colored habanero is significantly earlier than O.P. varieties on the market, making it ideal for farm market, plant producer, and home gardeners in many geographical locations. The heavy, large, thick-walled fruits mature to a lovely creamy, bright orange color and show good shelf life after harvest. Strong plants have short internodes and yield a bounty of peppers with the true habanero shape. Days to maturity from transplant: 75-85.

- Early maturity
- Cracking tolerance
- High yielding

## LONE RANGER Pepper

Our newest serrano pepper variety is a great heat-set choice, producing high yields of exceptionally large 4-4.5" fruits that maintain their size throughout the entire season. The thick walls allow for an extra-long shelf life of fruits showing consistently high heat unit readings. Plants have excellent cover and have high resistance to Xcv 0-3, 7 & 8. Days to maturity from transplant: 60-75.

- Incredible shelf life
- Large fruit size
- US Patent Pending

## MEGATRON Pepper

Megatron is a statement-making new jalapeño that boasts dense, extra-large fruit – averaging 4.5 inches! Despite their generous size, the deep green peppers mature extremely early at only 65 days from transplant. Strong, compact plants produce high yields of fruit that show good shelf life after harvest. HR: TMV: 0; Xcv 0-3, 7, 8. Days to maturity from transplant: 65.

- Extremely early
- Extra-large fruit size
- Strong, compact plant

## MERCER Pepper

Mercer's deep emerald to ruby red color will stop you in your tracks! As a bonus, Mercer delivers high yields, good cover, and firm, thick-walled fruit. The large, disease resistant plants are well adapted to many growing regions. Mercer has high resistance to TMV: 0 / Xcv: 0-3, 7, 8 and intermediate resistance to Pc. Days to maturity from transplant: 72-78.

- Outstanding green and red color
- Sturdy, disease resistant plants
- Excellent fruit quality

## BIG DEAL Pumpkin

We don't like to boast, but this pumpkin is a Big Deal! Big Deal is a large 25 lb.+ pumpkin with a hefty, well-embedded handle, uniform sized, sturdy fruit, dark orange color, and good yield potential. Plants have intermediate powdery mildew resistance and stand up to hot summer and fall conditions. Days to maturity from direct seed: 95.

- High yielding for its class
- Dark orange, smooth
- Well-embedded handle

## HULK Pumpkin

Hulk smashes the competition with high yields of extra-large, 30 lb.+, oblong barrel-shaped, ribbed fruit. Hulk sets multiple, uniform sized fruits per plant. Hulk is dark orange with a large, dark green, embedded handle. The plants have a space-saving restricted vine. Days to maturity from direct seed: 100.

- High yield potential for extra-large pumpkin: fruits per acre
- Uniform shape and size – 30 pounds plus
- Large embedded handle

## TRIBUTE Spinach

This new baby leaf variety offers fast growth and an interesting puckered leaf texture, making it attractive for multiple grower segments. The dark green, round-oval leaves are very uniform in shape and size. Thick, puckered leaves grow quite upright on uniform plants habit. Particularly reliable performance and quality in the fall season. HR: Pfs: 1-12, 14, 16. Days to maturity to baby leaf: 20-25.

- Moderate-fast growing speed
- Nice puckered texture
- Great overall leaf color and uniformity

## CRUNCHY DELIGHT Radish

Crunchy Delight is a new summer type radish that displays nice uniformity and internal qualities. The consistently round, bulb-shaped fruit are a glossy scarlet red with a brilliant white interior and are tolerant of cracking and pithing. Plants produce medium tall, erect tops, and show excellent yield potential, especially in Northern growing areas. Days to maturity from direct seed: 28.

- Summer type radish
- Tolerant of cracking and pithing
- Consistent round shape

## LAGUNA RED Tomato

Laguna Red is a high-quality, determinate salad variety, especially well-suited for growing in cooler seasons. Fruit is an attractive red, firm, and smooth-shouldered, and has good balanced flavor. An ideal choice for farm market growers. The plants are medium tall and benefit from light pruning if desired. HR: Aal / Fol: 1, 2 / For / ToMV: 0-2 / Va: 1 / Vd: 1, IR: Ss / Sbl / Sl / TYLCV: Is\*. Days to maturity from transplant: 68-72.

- Widely adapted
- Ideal for cool season production
- Extra-large fruit size

## RAMBLER Tomato

Rambler is an adaptable, high-quality determinate salad variety featuring high yield potential of jumbo and extra-large fruit. Fruit size, color, quality, and firmness are all excellent. The plants are strong, medium compact and have good cover. Rambler is widely adapted and can be produced using ground staking or high tunnel culture in a variety of regions. HR: Aal / Fol: 1-3 / For / Va: 1 / Vd: 1, IR: Sbl / Sl / Ss / TSWV. Days to maturity from transplant: 68-72.

- Widely adapted to multiple regions
- Fruits size up well
- Heavy yield potential

## THUNDERBIRD Tomato

Thunderbird is a vigorous hot set variety that thrives under warm and wet conditions. Yield potential is high on strong manageable plants that have a good balance of cover and ease of harvest. Extra-large, very firm, good-flavored fruit have a deep red interior color as part of Sakata's high color range. Thunderbird is well suited for farm markets, plant programs, and home gardeners alike. Days to maturity from transplant: 72-75. HR: Aal / Fol: 1-3 / For / Va: 1 / Vd: 1, IR: Sbl / Sl / Ss / TYLCV: Is\*.

- Extra-large, firm fruit
- Rich color
- Good hot set performance

## PREAKNESS Watermelon

Preakness is a new true "mini" triploid watermelon perfect for entertaining, family desserts, or those with tight refrigerator space! Uniform, blocky fruits have a very dark Crimson Sweet rind pattern and firm, sweet, dark red flesh that is extra sweet and tasty. The small pip size lends to nice presentation and little waste. Vigorous vines show excellent set of uniform round oval fruits at only 4-6 lbs. each. Days to Maturity from direct seed: 75-79

- High set of mini fruits on each vine
- Darker crimson rind pattern
- Dark red flesh with small pip size

## New BABY LEAF SPINACH Varieties

The two latest additions to our 'Side' series of baby leaf spinach are here! Both offer thick, beautiful dark green, smooth, round-oval leaves. The very uniform plants have high resistance to downy mildew (Pfs) races 1-12, 14-16, 19. They join standards, Lakeside, Oceanside, Riverside and Seaside, for multiple grower options in the baby leaf category.

### COUNTRYSIDE Spinach

- Moderate growth habit
- Some bolt tolerance
- Good holding ability

Days to maturity to baby leaf: 23-27

### DARKSIDE Spinach

- Slow to moderate growth habit
- Very upright plants
- Thick leaves

Days to maturity to baby leaf: 27-32

## Watermelon NEW HORIZON Line

Our newest triploid line offers the latest genetics in watermelons. Uniform, blocky fruits have attractive dark Crimson Sweet rind pattern and firm, sweet, dark red flesh that is sweet and tasty - perfect for fresh-cut market. Vigorous vines show excellent

yield potential and fruits hold well in the field. High resistance to Fusarium wilt races 0, 1.

- Excellent yield potential
- Deep red flesh with small pip size
- Very firm flesh holds well after cutting
- US Patent Pending

### EL CAPITAN

- 16-20 lb., blocky-oval
- Days to maturity from direct seed: 80-83

### SIERRA MADRE

- 18-24 lb., blocky-oval
- Days to maturity from direct seed: 83-86

### SIERRA NEVADA

- 17-21 lb., blocky-oval
- Days to maturity from direct seed: 83-86
