

# Sakata Home Grown

## ARICA Pepper

Glossy and attractive, Arica (SPP2323) bell pepper is widely adapted, early, and easy to grow. Fruit are large to extra-large, smooth and firm with bright red color at full maturity. The plant has good vigor, and is compact with very good cover and high yield potential. Arica has a heavy first set with the ability for continuous setting. It has high resistance to Tm: 0 / X spp: 0-3, 7, 8 and intermediate resistance to TSWV. Arica is well suited for both green and red harvest for fresh use and processing. Matures 70-75 days from transplant.

- High yield potential
- Compact plant with great cover
- Suited for green and red production

## CAMPESINO Pepper

For a mildly hot, full flavor pepper, look no further than Campesino! This pasilla type ("little raisin") provides depth of flavor used fresh or in its typical dried form. The strong, vigorous plants provide good yields of extra-large 6.5-8 inch fruits with narrow shoulders and tapered ends. Campesino can be harvested at dark green or after it turns deep burgundy. When dried, fruits show an excellent final dry weight ratio with a Scoville rating up to 1,000 units. HR: TMV:0 \\ IR: Pc. Matures about 95 days from transplant.

- Classic rich flavor
- High yields on strong plants
- Excellent dry weight
- US Patent #11,324,173

## SARGENTO Pepper

Sargento is an extra-large fruited poblano (Ancho) with very good quality that matures from glossy, dark green to deep red. The mid-maturity is suited for multiple harvests where it has the ability to maintain fruit size. The fruit are mid-long tapering, firm, straight and have a high percentage of two lobes. Vigorous plants have continuous setting ability and are adapted for long cycle production. The intermediate resistance to phytophthora is valuable for areas with pressure. Sargento is suited for the fresh and drying market. Matures 80-85 days from transplant.

- Widely adapted
- High yield potential
- Maintains very nice fruit size

## SHOCKWAVE Pepper

What a Jalapeno! With high heat units, Shockwave sports large, dark green, thick-walled 4" fruits that have an exceptional shelf life. It is a high-yielding, medium height plant with heavy fruit weight making it an excellent choice for fresh market. As good as its yield potential is, the disease resistance package may even be better with high resistance to X spp: 0-3, 7, 8, IR: Pc. Matures 80 days from transplant.

- Very high-yielding
- Heavy fruit weight for fresh market
- Excellent disease resistance

## PROSPER Spinach

Prosper is a widely adapted baby leaf spinach variety with great disease resistance, making it attractive to multiple markets. This baby leaf spinach holds a uniform shape and size and has smooth, dark green, upright leaves that are thick which results in high yield. Prosper has a slow to moderate growth rate. Sakata's new downy mildew races 1-19 resistance safeguards Prosper from common spinach complications.

- Downy mildew resistance races 1-19
- Holds shape and size well to allow flexibility in harvest
- Deep green, smooth leaf

## GRAND PRIX Melon

Grand Prix's intensely sweet flavor and creamy white, densely textured flesh tastes like a cross between a honeydew melon and pear. The deep emerald-green color, striations, and firmness will catch your eye in the garden or farmer's market. As a Christmas (or Piel de Sapo) type, Grand Prix melons will not have a strong scent but will store well. Strong plants are vigorous and disease resistant and produce mature fruits about 82-87 days from sowing.

- Balanced flavor- sweet and flavorful
- High quality exterior extends storage
- Intense interior and exterior color.

## DALI Melon

Dali Canary melon will set a new standard in farmers markets and home gardens. Dali tastes like summer—the white flesh is sweet and juicy with perfect texture and gentle aroma. You'll want to gobble all the bright yellow, smooth, 3-pound fruit immediately, but they will hold well after harvest. The vigorous plant has high yields and early maturity. Fruit are mature when the exterior brightens. Dali fruit have a small seed cavity and mature in about 80 days.

- Amazing flavor
- Excellent quality, nice sized fruit
- High yield

## YODA Chinese Cabbage

Yoda is a Napa Cabbage with a large, solid, barrel-shaped head and dark green outer leaves. The tightly packed interior leaves are white and brilliant yellow. The large, clubroot resistant plants grow quickly. Best planted in the early summer or fall. Matures in 65–72 days from direct seed.

- Heavy head with tightly packed leaves
- Disease resistant
- Excellent color both inside and out

## CERES Squash

We are excited to offer our newest butternut squash for those areas that need (or just prefer) early maturity! Ceres is a traditional, 3.5 – 4.5 lb butternut for the fresh market that is ready to harvest in just 90 to 95 days from direct seeding. The creamy tan exterior is very smooth with no ribbing and the interior boasts firm, solid, dark orange flesh. Ceres has a vigorous plant habit with intermediate resistance to powdery mildew: IR: Px.

- Early maturing: 90-95 days from direct seed
- Intermediate resistance to powdery mildew
- Fresh market quality 3.5 – 4.5 lb fruit

## REGAL RED Radish

Regal Red features fast maturing, attractive, scarlet red bulbs. While it is a summer variety that is suitable for many radish growing areas, it also performs well for spring/fall growing seasons. It yields very uniform, round bulbs with a medium-short top.

- Early maturing- 24 days
- Consistently uniform, round bulbs, especially in warm conditions
- Medium-short top
